Quantum Horizon Initiative - Annual Report

Page 1: Project Overview

The Quantum Horizon Initiative was established in 2024 to accelerate fault-tolerant quantum hardware and quantum error correction algorithms.

The primary objective is delivering a 256-logical-qubit processor by 2028.

Financial Performance and Budget Allocation

Page 2: Financial Summary for Fiscal Year 2025

Total operating revenue reached 12.8 million dollars, representing a 22 percent increase.
Research and development expenditure was allocated 4.5 million dollars.
Operating margin expanded to 18.4 percent due to cloud lab efficiencies.

Strategic Milestones and Deployment Schedule

Page 3: Forward Looking Roadmap

Phase 3 cryogenic testing will initiate in November 2026.
Commercial pilot deployments with partner institutions will launch in Q2 2027.

The lead architect for the superconducting subsystem is Dr. Elena Rostova.
